

**First records for two species of the genus *Macroscytus*
(Hemiptera: Heteroptera: Cydnidae)
from New South Wales (Australia)**

Abstract. First state records for two Australian species of the genus *Macroscytus* Fieb. , i.e., *M. glaberrimus*, and *M. monteithi*, are provided.

Key words: Hemiptera, Heteroptera, Cydnidae, *Macroscytus*, faunistics, new records, Australia, New South Wales.

At present, twelve species of the genus *Macroscytus* Fieber are known from Australia (Lis 1999, 2000, 2003). Recently, many new faunistic data, including first state records, were presented for six Australian *Macroscytus* species (Lis & Rakowiecka 2012).

The present note provides new state records for two species of the genus.

***Macroscytus glaberrimus* J. A. Lis, 1999**

Material examined

New South Wales: 1 ex., New South Wales, without precise data (Department of Biosystematics, Opole University, Poland).

Distribution

Up to date, recorded only from Queensland. **New to New South Wales.**

Macroscytus monteithi J. A. Lis, 1999

Material examined

New South Wales: 1 ex., Australia, Cabramatta, 9.ii.66, M.I. Nikitin, B.M. 1966-286, British Museum London (the Natural History Museum, London, UK).

Distribution

Known only from Queensland, so far. **New to New South Wales.**

Acknowledgments

We want to thank Dr. M. Webb (the Natural History Museum in London) for the loan of the material for our study.
